The screenshot shows the i-AUD Designer [DB Bot] > [i-META] interface. On the left, there's a sidebar titled "데이터베이스 목록" (Database List) with a search bar and a tree view containing "데이터베이스" (Database), "user-mail", "공통 데이터소스" (Common Data Source), and "임시 데이터" (Temporary Data). The main area is titled "데이터소스 - DataGrid". It has fields for "이름" (Name) set to "user-mail", "데이터베이스" (Database) set to "MTXRPTY", and "설명" (Description). Below these is a large text area for "SQL" containing a complex query:

```

SELECT "T1"."user_code" AS "C95696896" -- User Code
,"T1"."user_name" AS "D83F2608" -- User Name
,"T2"."mail_addr" AS "D4B13747" -- Mail Address
,"T2"."sms_no" AS "C97A94909" -- Mobile Number for SMS
FROM "public"."mtx_user" "T1" -- User Management
INNER JOIN "public"."mtx_user_mail" "T2" -- User Mail Information Management
ON ("T1"."user_code" = "T2"."user_code")

```

At the bottom right of the SQL area, it says "최대 100 건까지 조회 가능합니다." (You can retrieve up to 100 records.) and "실행" (Execute) button.

• i-AUD Designer [] . 'D(• Development)' . [i-AUD] . .
