The screenshot displays the DataGrid application window. On the left, a sidebar titled "데이터베이스 목록" (Database List) shows a tree view with "데이터베이스" (Database) expanded, containing "user-mail" and "공통 데이터베이스" (Common Database). The "user-mail" database is selected.

The main area is divided into two sections. The top section, titled "데이터베이스" (Database), shows the selected database "user-mail" and a table "MTXRPITY". Below this, the "설명" (Description) field is empty.

The bottom section, titled "SQL", contains a pre-written SQL query:

```

1 SELECT "T1"."user_code" AS "095696296" -- User Code
2 ,"T1"."user_name" AS "08CF2638" -- User Name
3 ,"T2"."mail_addr" AS "CAEB13747" -- Mail Address
4 ,"T2"."sms_no" AS "C87A84309" -- Mobile Number for SMS
5
6 FROM "public"."mtx_user" "T1" -- User Management
7 INNER JOIN "public"."mtx_user_mail" "T2" -- User Mail Information Management
8 ON ("T1"."user_code" = "T2"."user_code")

```

Below the SQL query, a message states "최대 100 건까지 조회 가능합니다." (You can search up to 100 records). To the right of this message is a button labeled "실행" (Execute).

At the bottom right of the application window, there are two buttons: "확인" (OK) and "취소" (Cancel).
